

Chute Wash System

The concrete industry is faced with increasing environmental standards and regulations. Authorities are concerned over the effects of washing down truck chutes on the ground where it may lead to storm drains and fish bearing streams. Many job sites now require provision for watertight containers to allow for collection and disposal of waste wash water.

The Envirochute system was developed to contain wash-down wastes and transfer the cement/sand slurry back into the truck where it may be reused in subsequent loads or disposal at the Ready Mix yard.

Be an innovator in your own market. Show customers you care about protecting the Environment. Contain job site wash down waste, increase your customer base, while increasing your bottom line profit.

Ask us How!

Rugged lightweight aluminum construction, durable and designed to function in all weather conditions.

Designed for day to day dependability, the Envirochute has no moving parts, no pumps or valves to fail. Simple to operate, and can be installed in approximately one hours time.

Dual purpose, can be used as an on site admixture dispenser eliminating the potential of driver injury carrying buckets and pails up ladders.

No double handling of waste, slurry is returned to drum where it can be used in subsequent loads.

Known amount of wash water returned to the drum for quality control purposes.

You've Seen the competition.. Now what are you waiting for? Call us today for solutions that work.

Hook unit on Chute

Attach Hoses

Wash Chute

Rinse aggregate caught in tray

Remove Basket and lift ball assembly, while turning on air

IT'S THAT SIMPLE!!
